# RAD Authenticator

# Eliminate Your Enterprise's First Risk

2022

Using stolen credentials is the first tactic hackers use to breach your network resources. RAD Authenticator provides the security you need to protect your network against the risk of identity theft.

RAD Authenticator is a non-SMS based, multi-factor authentication solution that reduces the risk of fraud, phishing, and password related attacks. It achieves its security introducing multiple authentication factors including One Time Password (OTP) generation, user, location, and biometric data.

RAD Authenticator Consists of Two Parts

Mobile App

A Mobile app that supports both IOS and Android provided to users to facilitate and secure their login process.
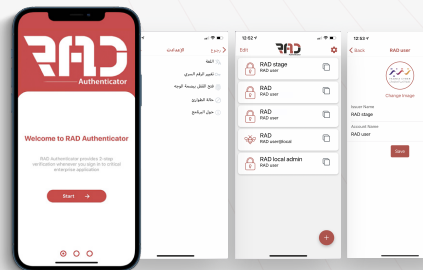

Authentication Engine

An Authentication Engine that gives the organization full administrative capability for the type and level of authentication to be applied to users. It's easily integrated with the organization's systems and services.
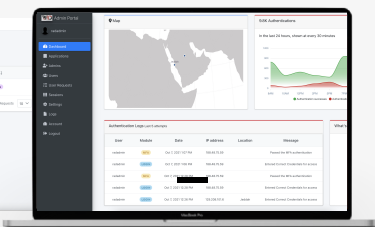

Every feature that you need and more
